FACIAL AESTHETICS

WRINKLE REDUCTION & DERMAL FILLERS

General Information for patients

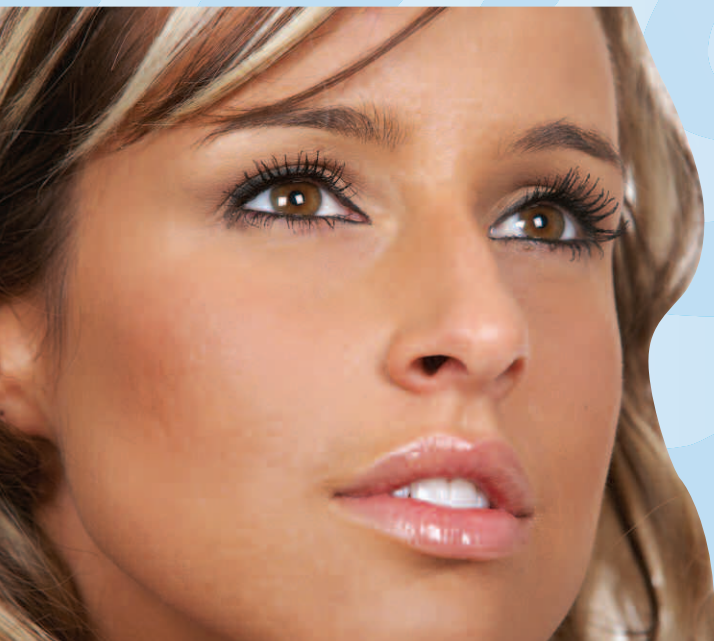

CONSULTATION

Our comprehensive consultation involves a full examination plus an in-depth discussion about your treatment. Our dental surgeons providing facial aesthetic treatment have extensive knowledge of facial anatomy and have completed recognised advanced Botulinium Toxin and Dermal Filler courses.

With this knowledge you can be assured of the highest standard of care and feel comfortable to experience the treatments you have always wanted, in a professional, safe and convenient environment.

Consultation has a cost of £30.00 which will be deducted from the final costs if you go ahead with treatment.

LINE & WRINKLE REDUCTION TREATMENT

Botulinium Toxin treatment is extremely popular due to its low cost, rapid results and simplicity of procedure. It is predominantly used for softening expression lines on the face, for example, frown lines between the eyebrows, forehead lines and crows feet. Treatment can smooth existing lines, prevent permanent lines from developing and give a fresher more youthful look. Results are seen over a 2-14 day period and last for 3-4 months. Prices are based on number of areas treated.

| | |
|---------------------------------------------|------------------|
| 1 Area | from £190 |
| 2 Areas | from £250 |
| 3 Areas | from £330 |
| Underarm (to reduce perspiration) | from £500 |

DERMAL FILLERS

Dermal Fillers are used for the smoothing of deeper lines, folds and for lip enhancement. Deep lines such as those from the side of the nose to the mouth are gently filled to give an instant result. Dermal Fillers are used on the lips to enhance pout, add volume or outline the existing lip line to increase contour and definition. Modern Dermal Fillers are made from hyaluronic acid, a substance naturally found within the dermis of the skin. Results last for around 9-12 months. These treatments will help to refresh your appearance and give a smoother, fresher more youthful look. Treatment is priced depending on how much filler is used.

| | |
|--------------------------------|------------------|
| Lip Enhancement | from £300 |
| Facial lines 1 Syringe | from £300 |
| Facial lines 2 Syringes | from £500 |
| Extra Syringes | £120 |

Typically one syringe would give mild to moderate lip enhancement to the lips, greater enhancement would require extra syringes. One syringe would treat two moderate nose to mouth lines. Deeper lines would require an extra syringe each side.

YOUR QUESTIONS ANSWERED

Is it safe?

As long as you are in a clinical medical environment and under the supervision of a medical professional this is an extremely safe procedure. Botulinium Toxin used in line relaxing is not new and was first used for wrinkle treatment 20 years ago. Botulinium Toxin has been used in medicine to treat muscle spasms since the 1970's with no serious or long term side effects.

The product used for Dermal Fillers is found naturally within the skin and therefore is completely safe to use. All the medications used has been fully tested, researched and approved.

How does the relaxing work?

Lines are formed on your face due to repeated creasing of the skin over time. Tiny injections into facial muscles cause them to relax and become less active, lines then begin to reduce giving a smoother, fresher and more youthful look. Treatment is repeated 3 times per year to begin with for maintenance but is required less often as the treatment continues.

Is it painful?

Any discomfort is very mild and brief. The injections last just seconds. Local anesthetics are used for the treatment of deeper lines and lip enhancement. Botulinium Toxin is a very simple procedure and proof lies in the vast number of people who regularly receive treatment.
